

PRESENTATION

CIBERLEGAL

Our Company

"We are a group of professionals practicing in the areas of law and computer engineering, specializing in technology and people development within organizations. Our approach is to guide and show each of our clients that Information Security and Cybersecurity needs to center on the most important link in the cybersecurity chain, the human factor."

Juan Pablo López Maluenda
Director Ciberlegal

Our Mission

"Our goal is to educate and build a high level of awareness in organizations with the objective of preventing or mitigating technological risks. Our approach is to make management executives, employees and third parties understand the correct use of technology and the main challenges it poses."

SERVICES

Certification of the Attendance Recording and Control System

To avoid fining companies, the Chilean Labor Bureau has recently required that the attendance recording and control systems companies use be authorized by it.

As such, all companies that must be certified as of December 28, 2021 must do so in accordance with ruling no. 2927/58.

Our company, which specializes in advising on legal matters related to technology, especially cybersecurity, has developed a comprehensive plan for certifying your company's attendance recording and control systems.

To this end, we offer the following services in this area:

- A) Analysis of the entire system (software and hardware).
- B) Reporting gaps detected for correction.
- C) Advising the client in case of doubts about any of the items to be certified.
- D) Issuance of the certificate plus the final detailed certification report, submitting proof and other documents required with the Labor Bureau.
- E) Filing and processing the application for obtaining authorization to operate the system with the Labor Bureau.

PROFESSIONAL EXPERIENCE

We have more than 18 years of professional experience in the local and global markets, advising companies from various industries, particularly in the area of information security, and delivering innovative, simple and streamlined solutions that meet your clients' and your cybersecurity needs.

Our approach is to design action strategies tailored to each business, with the objective of prioritizing time and resource savings during complex processes.

Our expertise includes broad experience in advising technology companies, especially companies that provide networking services such as network infrastructure, data centers, application development, and e-commerce.
