# CIBERLEGAL

## Our Company

"We are a group of professionals practicing in the areas of law and computer engineering, specializing in technology and people development within organizations. Our approach is to guide and show each of our clients that Information Security and Cybersecurity needs to center on the most important link in the cybersecurity chain, the human factor."

Juan Pablo López Maluenda  
Director Ciberlegal

## Our Mission

"Our goal is to educate and build a high level of awareness in organizations with the objective of preventing or mitigating technological risks. Our approach is to make management executives, employees and third parties understand the correct use of technology and the main challenges it poses."

# SERVICES

## Executive Management Cybersecurity Awareness and Sensitivity Program

Managing technological risks does not seem to play a fundamental part in the proper development of a company. In recent times, the massive adoption of technology – whether voluntary or mandatory as a result of the pandemic – has raised questions as to whether management executives, boards of directors and specialized management are informed and aware of these risks from a legal point of view and the liabilities that they face in this area. This program is specially customized for the company's senior management and executives. It is centered on cybersecurity, from the legal perspective, and the human factor composed of senior management, who can face civil, criminal and administrative liabilities surrounding the correct planning and adoption of plans that they must have in place for cybersecurity issues within the company.

Our program is divided into 2 sessions that can be customized according to your company's needs.

Presentations can be made through Zoom or Teams and last for 40 minutes each, followed by a 20-minute Q&A round on the topics covered in that session.

# SERVICES

## Content of Executive Management Cybersecurity Awareness and Sensitivity Program

The program will contain the following topics:

- Induction on strategies and measures to legally protect your company and the use of new technologies
- Methods for cyber-legal planning, management and implementation in order to comply with current regulations, particularly regarding remote work
- Issues relating to the civil and criminal liability of executive management and who may be liable for failing to act diligently in areas related to cybersecurity
- Induction on the Company's internal protocols, from cyber-legal to legal control
- Regulatory obligations (associated with your business sector)

*"You can't ask employees to do something they don't know. Investing in digital education will save millions of pesos for the future, build cybersecurity awareness, and reduce technological risks."*

# PROFESSIONAL EXPERIENCE

We have more than 18 years of professional experience in the local and global markets, advising companies from various industries, particularly in the area of information security, and delivering innovative, simple and streamlined solutions that meet your clients' and your cybersecurity needs.

Our approach is to design action strategies tailored to each business, with the objective of prioritizing time and resource savings during complex processes.

Our expertise includes broad experience in advising technology companies, especially companies that provide networking services such as network infrastructure, data centers, application development, and e-commerce.
